

Generative Artificial Intelligence (GenAI) Usage Transparency Statement

(Statement text inspired by Google search AI output for “ai transparency statement university”)

NOTE #1: Remove and replace the “[Instructions: ...]” text with your or your team’s responses. You or your team will not be penalized for using GenAI. However, you or your team may face *crucial conversations* and academic-based penalties if it is found that GenAI was used and it was not disclosed. Refer to the course syllabus for more information.

NOTE #2: Ensure to convert this file to a PDF when submitting this in URCourses.

Class/Instructor	ENSE [course number]/Dr. Tim Maciag
Name(s)	Group F (Eildvin Logrono, Elvis Omeh, Jose Gill, and Alison Malin)
Assignment:	Activity 1: observe, frame, & brainstorm
GenAI use	Yes, - we used Claude Ai to create a transcript of the client meeting and summarize the key points to utilize in the activity
Tool Identification	Claude AI
Purpose of use	Used to transcribe the memo of the client and summarize key points that we would need to remember to ensure it was included in brainstorming, empathy mapping, story mapping, and affinity diagramming.
Integration of GenAI Output	We asked the AI model to record and organize the audio memo of what the client wanted, and any background information needed to create our empathy and story mapping. Claude AI was a suitable tool to clearly and concisely organize the client’s thoughts to bridge the gulfs of execution and evaluation and create a website that meets both the client’s needs in a website and what would be easy for the users.
Limitations and Risks	Using AI to transcribe a conversation is not always accurate and can lead to miscommunication and misunderstanding if not verified. This can be caused due to poor recording, or improper language registration within the AI tool. It was important for us to also listen to the memo to ensure we were able to fact check the information Claude summarized.
Ethical Considerations	There is an ethical concern regarding consent to being recorded and transcribed, and as an avenue to argue plagiarism if used in a legal dispute. In this case, it was only used to create an easy way to refer to what the client was asking and keep record of our goals within the assignment. There were no quotes from the client that were to be used in the final website.
